

*Title: Selenium Testing on Shopping Portal*

*Problem Statements:*

- 1. Automate a test which verifies a registration of new user and login with newly registered user. (Tip: test should registered a unique user every time and verify its login)*
- 2. Automate a test which verifies that a logged in user can shop an item and checkout. After checkout verify the stock count is reduced by 1.*
- 3. Automate a test which verifies that user cannot buy an out of stock item. Select one item which can be made out of stock by repeating a buying scenario and then verify whether you can buy it after logging in.*
